Birst Infor CSI/SyteLine QuickStart

◊ Supports immediate user-friendly CSI/SyteLine data integration to Birst, driving business value, user adoption within days, and overall fast time to value

◊ Presents user friendly CSI/SyteLine data sources and field names (including code, code descriptor, and code/descriptor combined) to Birst Connect/Data Modeler

◊ Combines Related CSI/SyteLine open and history data as singular sources (i.e. purchase orders) supporting comprehensive trend analysis over time

◊ Provides flattened data sources to Birst by combining required Infor CSI/SyteLine transaction and code tables reducing overall data modeling effort.

◊ Flexibly supports integrating custom user fields and IDO extensions

◊ Modeled Birst Spaces (supports data integration within days of Birst provisioning)
